Product Update: SLK 7 transitions to SLK 7 GEN 2 Improved performance. Refined material composition.

Dear Business Partner,

At Electro Terminal, we continuously review and improve our products to meet our customers' requirements and maintain high standards of quality and reliability.

As part of this process, we have further developed our proven **SLK 7** and introduced its successor, the **SLK 7 GEN 2**. The new generation features an improved material composition and enhanced technical properties.

SLK 7

Previous generation

SLK 7 GEN 2

New generation

Your benefits with SLK 7 GEN 2

✓ Improved material properties

Enhanced impact resistance and flame-retardant properties contribute to reliable product performance.

✓ Optimised material composition

The materials used do not contain any Substances of Very High Concern (SVHC) listed on the REACH Candidate List. Titanium dioxide has been eliminated from the housing material, along with weathering stabilisers, without compromising product reliability.

- **Translucent housing:** The translucent housing provides better visibility of the internal components, making visual inspection during wiring easier.
- **Improved handling** Ribs on the sides of the housing provide a better grip, making the terminal easier to hold and handle during installation.

VAT-No.: ATU 56551948

✓ Easy transition

The mounting hole dimensions and fixing distances remain unchanged compared to the previous SLK 7, allowing for a straightforward transition without mechanical modifications.

✓ Existing certification remains valid

The existing ÖVE certificate (registration no. 163-002) will remain valid for the SLK 7 GEN 2.

Transition to SLK 7 GEN 2

The previous **SLK 7** will be discontinued as of **31 December 2026** and replaced by the SLK 7 GEN 2.

The following dates apply during the transition period:

- **From 1 November 2026:** The previous SLK 7 will only be manufactured against firm purchase orders. Forecasts and delivery schedules can no longer be accepted.
- **31 December 2026:** Final date for placing orders for the previous SLK 7.
- **After 31 December 2026:** The SLK 7 GEN 2 will be available as the successor product.

Deliveries of the previous SLK 7 will depend on the remaining raw material stock. If an order can no longer be fulfilled, either in full or in part, we will inform you during order processing and coordinate the transition to the SLK 7 GEN 2 with you.

Moving forward with SLK 7 GEN 2

With the SLK 7 GEN 2, we have combined improved technical performance with a revised material composition and easier handling, while maintaining compatibility with existing mounting arrangements. We believe these improvements make the SLK 7 GEN 2 a valuable successor to the existing product.

An overview of the affected part numbers is provided on the following page.

If you have any questions regarding the product transition or technical specifications, please contact your usual representative at Electro Terminal or email us at office@electroterminal.com.

With our best wishes for a “better connection”,

Andreas Elsler
Product Manager
